PROFESSIONAL SUMMARY

Data Scientist and Gen AI Engineer with hands-on experience building production-grade AI applications using **LLMs, multi-agent systems, and RAG pipelines**. Currently developing scalable Gen AI solutions at **Clinion**, including an internal multi-agent **QA Bot** with user authentication, file handling, and vector store integration, and an **eCRF Automation system** powered by RAG. Proficient in **Python, OpenAI, LangChain, and LLM orchestration**. Help reduce time, effort, and cost by developing AI-powered tools. I regularly integrate **AI tools** into my workflow to enhance productivity and efficiency.

SKILLS

- Programming Languages: Python, MySQL
- Gen AI & LLM Frameworks: OpenAI Agents SDK, LangChain, Hugging Face, Google Gemini, Ollama, Mistral, AI Agents, Multi-Agent Systems
- Core Expertise: RAG, AI Agents, Multi-Agent Systems, Prompt Engineering, ML Model
- AI/ML Libraries: Scikit-learn, TensorFlow, PyTorch, XGBoost, LightGBM, NLTK, TF-IDF
- Data & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Power BI, Excel, Streamlit, Jupyter Notebook
- Deployment & Dev Tools: FastAPI, Docker, GitHub, VS Code, Anaconda, Google Antigravity, Cursor AI

PROFESSIONAL EXPERIENCE

Generative AI Intern | Clinion, Hyderabad | Dec 2025 – Present

- Built an internal Multi-Agent QA platform using OpenAI Agents SDK for automated document analysis, data extraction, and form population.
- Developed a RAG-based eCRF extraction pipeline to retrieve and analyze information from clinical protocols and study documents.
- Designed vector-store powered semantic retrieval workflows for accurate context-aware responses from large document collections.
- Designed modular agent architectures with tool calling and reasoning capabilities for automated decision-making workflows.

AI Trainee | Infosys, Bhubaneswar, Odisha | July 2025 – Sep 2025

- Trained in ML model development, NLP applications, and data preparation workflows.
- Collaborated using Agile methodology to build and evaluate AI models.
- Gained exposure to corporate coding standards and deployment principles.

Data Science Mentor | Naresh iTechnology, Hyderabad | Mar 2025 – July 2025 & Sep 2025 – Dec 2025

- Mentored 50+ students across Python, Machine Learning, EDA, Power BI, and Data Visualization.
- Guided end-to-end project development and model optimization for data science learners.
- Enhanced curriculum modules to incorporate the latest Data Science and Data Analytics topics.

PROJECTS

- **Internal Multi-Agent QA Bot with File Handling & Auto-Fill (Company internal)**
Technologies: Python and Libraries, OpenAI Agents - SDK, OpenAI Vector store
 - Built a multi-agent AI system for document ingestion, semantic search, and automated form field extraction using OpenAI Agents SDK and Vector Store.
 - Implemented secure user authentication and isolated conversation history for personalized interactions.
 - Business Impact: Automated clinical document processing and form population workflows, reducing manual effort, processing time, and data-entry errors for clinical trial teams.
- **AI-Powered Clinical Protocol Intelligence Platform (Company internal)**
Technologies: Python, OpenAI Agents SDK, OpenAI Responses API, OpenAI Vector Store, RAG, LLMs, Async Processing, JSON-based Workflow Automation
 - Built a multi-agent RAG platform that automatically converts clinical trial protocols into structured eCRF design artifacts, including visit schedules, CRF pages, visit-page matrices, field specifications, and edit check requirements.
 - Reduced manual protocol review effort and accelerated clinical study build activities through AI-driven automation.
 - Business Impact: Automated protocol-to-eCRF conversion, reducing manual effort and enabling faster generation of CRF specifications, field definitions, and edit checks.
- **Mental Health Detection: Text Classification using NLP**
Technologies: Python, NLTK, TF-IDF, Scikit-Learn, Matplotlib, Seaborn
 - Built an NLP-based text classification system to identify mental health conditions (Depression, Anxiety, Normal) from free-form text.
 - Applied text preprocessing, TF-IDF feature extraction, and Logistic Regression on 10,000+ samples, achieving 86% accuracy.
 - Business Impact: Enabled automated mental health screening from written text, supporting scalable early detection and triage workflows.

EDUCATION

- Bachelor of Science (Information Technology & Management) 2021 - 2024
Fakir Mohan University, Balasore
- Intermediate (Science) 2019 - 2021
Saheed Higher Secondary School, Barapur, Bhadrak

ACHIEVEMENTS & CERTIFICATIONS

- Generative AI Professional - Oracle (2025) [link](#)
- Natural Language Processing for Developers - Infosys (2025) [link](#)
- Full Stack Data Science & AI - Naresh iTechnologies (July 2024 - Jan 2025, In-Person Training) [link](#)
- Data Science - Microsoft (Skill for Odisha, 2023) [link](#)
